

Installing To The MJ3 Dehumidifying Dryer

Dryer heat exhausted to plant causes a double loss of power when considering AC! Achieve saving energy through recirculation of regenerated dryer exhaust heat!

Regeneration Exhaust heat Re-Circulating Unit (For MJ3)

Overview The Regeneration Exhaust Heat Re-circulating unit captures heat in the exhaust air and uses it to warm the intake air. This lessens the demand on the heater, and lowers power use. It is possible to retrofit this system to an existing MJ3 dryer.

Features

- Energy savings start immediately after this simple installation.
- Pays for itself in one year, and then produces clear profit after that.
