

Equipped With **i plas**® Functions

Heat loads change, but a chillers electricity consumption does not. To increase efficiency, a chiller should adapt to demand. Energy savings up to **57%** is possible with inverter control!

Mold Chiller System (Chiller)

6

Overview The mold Chiller system (Chiller) controls the compressor output via an inverter. This system reacts to heat load conditions and implements the energy saving's mode.

- Features**
- Energy saves are realized by the inverters control of the compressor.
 - Built-in controller with energy saving indicator.
 - Supports 5-35°C a wide temperature range.
 - Maintenance is improved by use of a double pipe-type condenser.
 - External communication functions include, external start-up, alarm output, alarm buzzer all are standard features.

Matsui, your Plastic molding partner for resource reduction, propose to achieve 'factor 4' in molding factors.
We aim to increase productivity by 4times by achieving the following, 'Save Water', 'Save Resin s' and 'save Energy'.
