

For Low Temperature Molding

Do you set a high mold temperature In order to prevent dew condensation? Realize high cycle molding by reduce moisture level around the mold!

Mold Dehumidifier Unit

Overview This unit is prevents moisture build up on the mold which can lower the mold temperature and can help in reducing cycle time.

Features •Low running cost:

Uses dehumidifying desiccant rotor that does not use refrigerator.

•Maintenance free:

The dehumidifying desiccant rotor is of honeycomb construction with little degradation.

•Assists in stabilizing the molding environment.

•Covering the mold area in a booth decreases molding defects.
