

For Gas Removal During The Plasticization Of Resin Materials

Do you have gas related problems?
Remove gas by vacuum from inside the injection-molding machine cylinder!

Gas Trainer

Overview Installs in injection-molding machine to pull out vaporization (gas for moisture, solvent, addition drug and so on) that occurred inside injection-molding machine cylinder with vacuum pump.

■ Effect of the Gas Trainer (Precision mold)

- Features**
- Reduces mold maintenance.
 - Continuation supply under decompression is possible with two air lock steps.
 - Supports high cycle injection-molding machine.
 - Visual material filling is possible.
 - Select to general operation can be done easily on touch panel.
