

There Is A Possibility Of Some Contaminations At All Processes!

Material tank is first contaminant mixing source.  
Use special tank with clean specifications!

## Clean Specification Resin Bin There

**Overview** Material tank with clean specifications for contaminant prevention. This is the column structure for easy cleaning, and prevent a contamination by filter which attached a part of fresh air admission port.

Tank with air breather

Hopper which can connect flexible containers to directly

- Features**
- Exclusive design special surface material.
  - Each filter can be set exclusively  
(Example: 20  $\mu\text{m}$  Cut, Optics: 0.3-0.1  $\mu\text{m}$ )
  - This supports various sizes such as paper bag and flecon receiving model, etc.
