

In Resin Material Line

Metallic foreign material mixing is large risk when molding.
 Will catch all metallic foreign material from the resin!

Metal Detector

Overview Removes metallic foreign material by sensor-type.
 Can remove metallic particles that are not detected by magnetic separator.

Features

- High detection sensitivity (Iron: $\phi 0.2\text{mm}$, Stainless steel: $\phi 0.3\text{mm}$)
- Can remove metallic particles that are not detected by magnetic separator. (Stainless steel, aluminum, copper, brass and so on)
- Is compact and lightweight and can mount directly on the injection molding machine.
- It is earthquake-resistant, heat-resistant, wear resistance, and resistance electrostatic.
- Easy to clean design.
