

There Is Possibility Of Foreign Material Contamination In All Processes!

Foreign material fills in open air.

Remove foreign material from the air with high-performance filter!

HEPA Filter / Nozzle With Filter

Overview This is rationalization equipment that is essential to automatic operation of molding line. In the material conveying process, prevents dust escaping into open air. The proper arrangement for filter prevents dust and foreign material from mixing with open air.

Features

- Filtration capacity can differ according to use.
- There is also heat-resistant specification filter in the drying line.
