

For Small molding parts

Designed for weld less molding requiring high temperatures!
 Heat & Cool molding with oil!
 Can be used for metallic molding as well.

Heat&Cool System (with oil medium)

Overview The oil-type heat & cool technology for mold temperature controller has been created by Matsui. Supports 300°C temperature and exceeds temperatures of steam- type controller (Max 180°C).

- Features**
- Equipment cost is inexpensive compared to induction heating-type. (License fee's not required.)
 - Potentially your current mold may be suitable for this application.
 - This technology has multiple applications for many facilities.
 - The unit will choose the heat & cool condition automatically using Matsui's technology.
 - Monitoring difficult molding conditions is possible by using this controller.
