Added Value UP

To prevent gas generation at the injection part.

Do you have any gas-related problems during plasticization? Prevent gas generation through constant feeding of resins, preventing problems!

Fixed Amount Material Feeding Unit

Overview

Gas generation is prevented by reducing filling density in the cylinder through constant feeding of the resin materials.

This unit also prevents molded item burn and gas vent clogging of the cast by helping discharging water and gas through the gap in the cylinder.

Features

Exhausting water and gas helps:

- · prevent molding defects.
- minimize cylinder wear.
- reduce the frequency of cast maintenance.

Doubling Wealth, Halving Resourse Use

Matsui, your Plastic molding partner for resorce reduction, propose to achieve 'factor 4' in molding factors.

We aim to increase productivity by 4times by achieving the following, 'Save Water', 'Save Rasin s' and 'save Energy'.

If you are looking for a best solution...
